PROFESSIONAL SUMMARY

Staff Software Engineer with 17 years building and shipping backend services for high-scale, distributed platforms — a product-minded engineer who works directly with product and design to turn customer needs into well-tested, maintainable software. Strong on service architecture, API design, relational databases and CI/CD, primarily in C#/.NET. Deep hands-on AI engineering experience, with AI-assisted development (Claude Code, GitHub Copilot) a daily part of how I work.

Phenomenal at bridging product and engineering — known for the drawings that clarified solutions and constraints so product, design and engineers all understood. A true sparring partner who mentored engineers into confident problem-solvers and carried the culture of the team.

— Flemming Humlum Sjøgaard, Product Manager, Templafy

EXPERIENCE

Templafy — Staff Software Engineer (Former Tech Lead)

Aug 2018 – Present

C#/.NET, DDD, Azure, AKS, microservices, event-driven, Terraform (IaC), SQL Server, Redis, React/TypeScript

- **Product-minded delivery (2021).** Working in an empowered product trio (engineer + PM + designer, opportunity solution trees), caught an off-roadmap customer pain during discovery and shipped “Resource Diagram” — a database-style visualisation of customer data — as a ~2-day experiment with one frontend engineer. Became one of 2021’s most successful features, showcased by the CPO at company all-hands.
- **AI-assisted development & AI engineering.** Use AI coding assistants daily and bring an evaluation mindset to their output — built a declarative AI evaluation framework (20+ evaluators) and observability over full LLM interactions, adopted by ~30 engineers across 6 teams. Maintain ClaudeSkills, a library of reusable Claude Code skills, and ran a hands-on LLM/Codex engineering workshop.
- **Testing & quality.** Sustained an 80% coverage bar over ~8 years — predominantly controller-level integration tests running against a real SQL Server (Azurite for storage), plus end-to-end tests for critical success paths and unit tests for complex logic.
- **Architecture & messaging.** Drove modern service architecture — monolith-to-SCS decomposition, API-type design and reconciliation, team-wide Domain-Driven Design — over an event-driven backbone (Azure Service Bus topics & queues via MassTransit). Designed for operability: scheduled work runs through message processors with automatic retries and dead-letter monitoring, owning performance and reliability in production.
- **Database scaling.** Diagnosed runaway growth in the central User Management store — login logs had reached 250GB+ of a 312GB database (38M rows in six months vs 23M over the prior two years) — and led a three-step fix that halted the growth and reclaimed the space.
- **Leadership & mentorship.** Tech Lead of the central Account team (9 engineers; 4 self-contained systems) — mentored engineers into confident problem-solvers, supported newcomers, and taught backend & SQL fundamentals for ~3 years.

Charlie Tango (KMD) — Senior Developer (Consultancy)

Oct 2015 – Aug 2018

C#/.NET, Azure, SQL Server, Umbraco, EPiServer · multi-client, client-facing

- **Borgerforslag (Danish Parliament).** Worked directly with parliament admins and their project manager to improve the citizen-proposal platform; designed and showcased prospective features (e.g. “Hot Topics”, grammar correction); also served as Azure admin hosting the live site.
- **Brandson (18-country platform).** Partnered directly with the customer’s project manager on how country-site admins should operate, and co-designed features to realise her ideas; long-standing client relationship.
- **CBB.dk.** Delivered for the CBB telecom/MVNO web shop.

Shatel — Senior Software Developer

Jul 2012 – Sep 2015

C#/.NET, SQL Server · in-house, consultative

- Architected enterprise telecom applications, scaling the platform from 500k to 900k+ users; reviewed requested internal processes and proposed simpler, often better implementations than the original brief.

CORE TECHNICAL SKILLS

Backend & systems: C#, .NET, SQL Server, distributed systems, microservices, Domain-Driven Design (DDD), API design, database performance & scaling

Testing frameworks: Playwright (E2E), NUnit, FluentAssertions, NSubstitute

Messaging, cloud & DevOps: Azure Service Bus (topics & queues) & MassTransit, RabbitMQ, event-driven architecture; Azure, AKS / Kubernetes, Docker, Helm, CI/CD, IaC (Terraform)

AI engineering & AI-assisted dev: LLM integration, RAG, AI evaluation & observability; daily AI coding assistants; Claude Code skills (ClaudeSkills)

Frontend (working level): React, TypeScript

Product & discovery: Empowered product teams (trios), continuous discovery, opportunity solution trees

EDUCATION

MSc, Information Technology (focus on NLP) — University of Shiraz 2013
Recognised as Top Student

BSc, Software Engineering — Sadjad University of Technology 2008

OPEN SOURCE, COMMUNITY & CERTIFICATIONS

- **Stack Overflow.** Top-tier contributor, 11,600+ lifetime reputation.
- **Open source.** Microsoft SCIM, SimpleIdServer SCIM, jpglens — performance optimisations, bug fixes, setup enhancements.
- **Projects.** ClaudeSkills — a library of reusable Claude Code skills (PowerShell) for practical agentic workflows (github.com/ashkansirous).
- **Speaking.** Guest Lecturer (Digital Transformation), Brunel University London — case study on Templafy's information-systems strategy plus a hands-on AI engineering workshop (LLMs, GitHub Pages, Codex).
- **Certifications.** MCSA, MCSD, MCAD (2019); EPiServer (2018).

SELECTED RECOMMENDATIONS

"A rare ability to move effortlessly between high-level architecture and low-level implementation; a key contributor to our distributed architecture, with significant, lasting impact." — **René Gundersen, CTO (formerly Templafy, 7 yrs)**

"Brings structure to complex areas like AI evaluation and data flows, translating risk into scalable, production-ready systems — pragmatic, and trusted across teams to drive critical initiatives forward." — **Silvia Belloni, InfoSec & IT Governance Lead, Templafy**

"Someone you could count on during incidents — calm and sharp, with deep performance, scalability and database expertise that resolved issues where others were stuck." — **Dan Antal, Staff Engineer**
